April 2001

THE MAGNUS PROJECT

As many of you know, my younger son, Magnus, was severely injured by vaccines. Our home videos show how a normal, happy, healthy, sociable child who could laugh and talk was rendered autistic, unreachable and speechless: humming, screaming, flapping his hands and banging his head. It was horrific. Even worse: we were told the condition was incurable and that nothing could be done. I could not accept this and in 1995 I launched an appeal to help him. Many of you contributed. I would like to thank you all, including all the people who

contributed anonymously and sent me unsigned notes asking not to be thanked.

Thank you anyway, whoever you are and wherever you may be.

You must be wondering how things are going. It was my original intention

to issue a regular newsletter to keep you all informed, but the cost and

time involved made this impractical. However, now that so many people have e-mail I can at least keep those who are on line up to date.

The Magnus Project has grown in scope and may yet be instrumental in bringing an end to the entire vaccine scandal. There are now several aspects to the project. These include: curing Magnus (and others); warning people about vaccines and the appalling injuries they cause; and

getting compensation from insurance companies and vaccine manufacturers.

Curing Magnus (and others)

Thanks to you, I was able to get a series of state-of-the-art laboratory

tests done. These showed that Magnus had severe dysbiosis and suffered from leaky gut syndrome. He was riddled with fungus and parasites and their toxins were lodged in his body. The laboratory commented that the levels of microbial metabolites were among the highest ever recorded. He was in a bad way. The vaccines had damaged his gut wall, his digestive system was not working properly, proteins were being broken down into peptides instead of amino-acids and these and other semi-digested foods were leaking through his damaged gut and causing havoc.

It was all terrible news, but at least it gave us something to go on. Moreover, some children who had been cured of their dysbiosis had also been cured of their autism. Our strategy has therefore been to antidote the vaccines, improve his digestion, get rid of the micro-organisms, restore gut ecology, repair the gut wall, detoxify Magnus and (hopefully) bring back the little boy we lost.

Sounds simple. It is actually quite tricky. It is easy to destroy someone's life with a jab. It is the work of a moment. Repairing that damage requires skill, persistence and ingenuity. We decided to remove gluten, dairy products, flour products, sugar and other foodstuffs that caused adverse reactions from Magnus's diet, while judiciously adding supplements that would encourage normal gut flora and discourage the interlopers.

This proved frustratingly difficult: we would get rid of one micro-organism, such as clostridia, only to find that another, such as candida, had taken its place. After a number of setbacks we finally managed to achieve a major breakthrough this year when we re-examined our videos. It was clear that Magnus's decline became precipitous when he was weaned. Breast milk had protected him. Breast milk contains lactoferrin. Lactoferrin makes iron unavailable to fungus and parasites in the gut. Within weeks of using lactoferrin we started making progress. The microbes are now under control, their poisons are being eliminated, the gut is healing and the improvement in Magnus's condition has been remarkable. The next few months should prove interesting, to say the least. If all goes well our pioneering approach may yet become the standard method for treating autism in the future.

Warning people about vaccines

It is plain from the medical and scientific literature that there is no evidence that vaccines confer immunity against anything. No double-blind

placebo-controlled trials have ever been conducted. No long-term safety trials have ever been carried out. Even if such evidence did exist, scientific studies show that vaccines cause death, cancer, acute encephalopathy, anaphylaxis, febrile seizures, brachial neuritis, Guillan Barre syndrome, arthritis, multiple sclerosis, cancer, poliomyelitis,

asthma and allergies, among other things. When Japan raised the vaccination age

to two years, cot death ceased to exist and infant mortality plummeted. Vaccines contain known carcinogens such as formaldehyde, aluminium phosphate, thiomersal (a mercury compound) foreign proteins (antigens) and contaminating animal proteins and viruses from the tissues used to grow them. We have vaccines to thank for the AIDS epidemic (monkey viruses from the monkey meat used to grow the vaccine were injected into

unsuspecting Africans) and the impending CJD epidemic (vaccines cultured on the brains of cows that may have been incubating mad cow disease have been injected into an unknown number of people). Monkey virus SV40 (a vaccine contaminant) has been injected into hundreds of millions of people. Not only is it carcinogenic, it can

also manipulate the human genetic code. New viruses are being discovered all the time. Vaccines are inherently dangerous.

What this all means is that healthy children (and adults) are being deliberately killed and mutilated. This is wrong. People are not being told and even doctors are woefully ignorant about vaccines. Appended to this letter is a list of links and sources. You can help me to warn others by

reading the material and disseminating it to as many people as possible.

I also try to warn people by writing newspaper articles and lecturing on the dangers of vaccines. I would be happy to give a lecture in your area

if you would like to organize one. If you would like me to e-mail you some of my articles, let me know.

Compensation

A number of lawsuits are pending. The first one is against our insurance

company and is the main reason for writing to you now.

They have refused to pay out on Magnus's insurance policy, saying that it excludes congenital conditions and that Magnus was born autistic. This is in spite of the testimony of friends and relatives that he was a normal infant and our own video recordings that confirm this. There is also the epidemiological evidence, which is convincing, to say the least: autism has increased from the first 11 cases in 1942, to nearly a

million

in the USA alone and is now reaching epidemic proportions. A government official has admitted that there are no unvaccinated autistic children.

Only the vaccinated are affected. Autism has increased by 500% in three years in some states (a computerized vaccination tracking system was introduced in 1997 to catch those that had been missed). The incidence of autism is now 1 in 250 children in some states and rising. (This figure would appear to be out of date. One recipient has sent me the following message: "Come to think of it there is one serious error in your text. You are grossly understating the prevalence in small children. Figures are coming out much nearer to 1:138 children (which equates to 1:69 boys) in unofficial

estimates for 3 year olds in Kingston and in Wakefield.")

Congenital diseases cannot possibly increase in this fashion. Autism cannot therefore be congenital. This is a man-made catastrophe and yet the insurance company is refusing to pay us what they owe us. This is not uncommon. Insurance companies cynically calculate that a family with a handicapped child cannot afford to sue them and they use delaying tactics, inflated costs and endless appeals to break those with the temerity to try anyway. This tactic usually works, but in the age of the internet

and the case of Magnus, they may have miscalculated. I am therefore launching an appeal to raise 25,000 pounds, or more than 300,000 Kronor by October 2000 (we have to commence proceedings by November 2000

at the latest). Would you like to help Magnus to get what he is owed so I can continue to treat him? Think of your contribution as an investment: if we win I shall offer all our benefactors their money back with interest. When you examine the evidence and when I tell you that some of the world's leading experts on autism and vaccine damage have agreed to testify on our behalf, I hope you will agree that our chances are excellent and worth investing in. Our case is of great importance, since it is likely to create a precedent for thousands of families hitherto wrongfully denied compensation.

For contributions to the British account, cheques should be made payable

to The Magnus Rees Fund, account 45 034 6080 and sent to the above address or to Girobank, Bootle, Merseyside GIR 0AA. For contributions to the Swedish account, cheques should be made payable to Magnus-insamlingen, account 618 01 54-4 and sent to the above address or

to Postgirot, 110 81 Stockholm. If would-be donors have giro accounts, transfers to the Magnus accounts can be made using the postal giro system. Money can also be deposited in the accounts at any British or Swedish post office or bank.

Please accept my apologies if you find this letter unwelcome or intrusive, but for all I know you might be one of Magnus's anonymous benefactors (see above). Just let me know if you do not wish to receive any more Magnus newsletters and I shall delete your name from the mailing list.

Please forward this appeal to others and spread the word. The more people who know, the better our chances: modest contributions on a regular basis from a few thousand people around the globe would enable me to bring this project to a successful conclusion.

The last few years have been extremely difficult and I would not wish this misfortune on anybody. Let us bring the autism epidemic to an end, so that nobody else has to suffer as we have. The strain has been appalling, but your support and encouragement have made things a lot easier. Thank you all once again.

Alan Rees

I have acquired quite a lot of information on vaccines, much of it from the net, and I am often asked for a list of vaccine websites. Here they are.

The following should be clickable links to some useful sites. Please pass them on to as many people as possible.

If any of them do not work for any reason, please let me know.

All feedback welcomed. Most of these I got from the list published in The Informed Parent. The second list, Internet Resources, was copied from one of the sites on

my list. There is only a little duplication.

"Most of the cheats in science are MDs."

Linus Pauling, twice winner of the Nobel Prize

"A doctor can bury his mistakes, an architect can only plant vines."

Frank Lloyd Wright

The following are my latest collection of links as of March 2001.

Sites appear, disappear, get linked to each other, amalgamate and change. All

feedback appreciated to find new and reincarnated sites. An asterisk * and comments indicate problems of accessibility.

ENGLISH:

This article by Viera Scheiber on autism and vaccines (February 2001) should be read by everyone: <http://www.whale.to/vaccine/sch.html>

The VOSI study shows that vaccines spread the diseases they are supposed to prevent and cause new ones.

Voices of Safety International (VOSI) is a Standards Development

Organization (SDO) which is recognized by the National Institute of Standards & Technology. See <http://www.voicesofsafety.com> home page "About VOSI".

VOSI has approved proposed standard V50.2, "Removal of Mercury (Thimerosal) as a Preservative in Vaccines & "Freedom of Choice" Based on Whether Vaccines are Really Safe and Effective". This standard requires the FDA and CDC to ban the use of mercury, a known neurotoxin, in all vaccines IMMEDIATELY.

Click on "Public Health".

Click on the V50.2 standard and read the associated Research Report that PROVES that children are 12 times more likely to become autistic after being vaccinated compared to never having been vaccinated.

Viera Scheibner's article on shaken baby syndrome: <http://www.nexusmagazine.com/shakenbaby.html>
A must read. Nexus site recommended.

The founder and president of the Autism Research Institute, Bernard Rimland, is of the opinion that vaccines cause autism. Here is an article he wrote on the subject: <http://www.autism.com/ari/editorials/explosion.html>

the Congressional vaccination-autism hearings can be watched on C-SPAN. http://video.c-span.org:8080/ramgen/ldrive/x040600_autism.rm *No longer available August 2000. Pity.

You will need Real Player which can be downloaded free...
<http://download.cnet.com/downloads/1,10150,0-10001-103-0-1-7,00.html?qt=%22Real+Player%22&cn=&ca=10001>

The Whale site has been changed to <http://www.whaleto.freemove.co.uk/vaccines.html>
The whale site is a personal favourite. Lots of info.

The Arizona site is very comprehensive:
<http://www.azavenue.com/kelly/organizations.htm>

For more information about monkey virus SV40 in vaccines:
<http://www.sightings.com/health/salk.htm>

<http://www.van.org.uk>
Excellent site with good links to others

Freedom of choice in health care
<http://www.yesic.com/~fchc>

VRAN's website. Links to others

AIA's response to the whitewash article in the Lancet shows that the study's own data proves that vaccines cause autism

<http://www.kessick.demon.co.uk/2commonspr.html>

Vaccines cause cancer too. This is the Horwin's article on the Whale website.

Their son died from brain tumours after vaccination. Their story is heart-breaking.

The tumours contained monkey virus SV40. They are taking legal action against Lederle <http://www.whaleto.freeserve.co.uk/vaccines/horwin.html>

campaign against fraudulent medical research

<http://www.pnc.com.au/~cafmr/>

This site is important. Conventional medicine is built on a foundation of fraud. 85% of medical and surgical procedures are scientifically unproven (British Medical Journal October 1991) Only one in 24,000 drug reactions is ever reported by the doctor (British Journal of Clinical Pharmacology 1997; 43:177-181). Drug reactions are now the world's fourth major killer. They cause more than 100,000 deaths in the USA every year. Only heart disease, cancer and stroke are more dangerous than drugs (JAMA 1998; 279 1200-05 Few people are aware of how endemic and widespread fraud is in medicine (see quotation from Pauling above). For an in-depth study, read the book "The Betrayers of Truth by Broad & Wade, or order "The Pharmaceutical Drug racket" from the Vaccination Information site below.

<http://www.vaccinfo.karoo.net>

The vaccine information site. Compact, useful and good links to others.

One way that vaccinators like to cheat is to re-define the disease (polio, for example)

and diagnose it as something else in the vaccinated (polio again).

The following is a good example:

<http://www.ias.org.nz/diphtheria.htm>

It's comforting to know that you can't get diphtheria if you're vaccinated, even if you've got it...

Australian Vaccination Network:

<http://www.avn.org.au>

Group takes legal actions and challenges government violation of informed consent laws.
